Patent No. 6403353

GENERAL INFORMATION:
TYPLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USERENCE: LOGOLIYABIV
TITLE OF INVENTION: THERBOY
CURRENT APPLICATION NUMBER: US/09/978,197

CURRENT PAPLICATION NUMBER: 09/813,817

PRIOR FILING DATE: 2001-10-17
PRIOR FILING DATE: 2001-03-22

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 4.0

has cytidine activity similar to APOBEC-1. AID has antiallergic, antianemenic, antiasthmatic, ophthalmological, anti-HIV and dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinaemia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen disease, Diseage disease, ataxia telangiectasia, common variable immunodeficiency disorder, MIC (major histocompatibility class) class in deficiency disease, AIDS (auto immunodeficiency syndrome), elevated ing disorder, and IgG subclass selection disorder. The DNA sequences encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders.
                                                                                                                                                                                                                                                                                                                                                              200 TCCTTTTCACTGGACTTTGGTTATCTTCGCAATAAGAACGGCTGCCACGTGGAATTGCTC 259

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving constituting a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cappended to generic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human capped sequence data for this patent did not appear in the printed sequence. The sequence data for this patent did not appear in the printed sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2066 GATCTCAGCTTACTGCAACCTCCACCTCCTGGGTTCAAGCGATTCTCCTGCCTCAGCCTC 2007
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20

Threation also ratates to vectors and recombinant hest cells comportsing a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides of antibodies against the polypeptides of the invention. Although novel, many of the bind to polypeptides of the invention have homology to known proteins, thereby completed and interpretation of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence the invention activities. Including cytokine, cell proliferation or cell differentiation activities; and hence of the invention activities; and hence the invention activities; activito or inhibbin-related activities; chamacochies receptor or ligand activities; chamacochies receptor or ligand activities; chamacochies receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis.

the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytckine, cell proliferation or cell differentiation activity or may induce production of other cytckines in certain cell populations and may exhibit immune stimulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The PNs and proteins of the invention are predicted to have biological activities which would make them suitable for treating, preventing activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, inmulating (e.g. as vaccines) or suppressing activity, hemostatics activity, induminating activity, chemotextic/chemokinetic activity, and thrombolytic activity, chemotextic/chemokinetic activity, and tumor inhibition activity. The PNs are also stated to be useful for gene therapy. Other activities include inhibiting the growth, infection or function of bacteria, fungi. viruses and other parasites; effecting bodily characteristics such as, e.g. weight, color, skin, etc., effecting biorhythms or caricadic cycles; enhancing fertility; treatment of depression; treatment of pain; hormonal or endocrine activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          95 ATGAACCGGAGGAAGTTTCTTTACCAATTCAAAATGTCCGCTGGGCTAAGGGTCGGCGT 154

or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in disorders including tissue, skin and organ transplantation and in art-versus-host diseases (GVHD), in the induction of tumnur immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of periodortal disease, osteoporosis or osteoarthritis, mediated by alzheimer's, Parkinson's diseases, Huntington's disease, amplotrophic lateral sclerosis, and Shy-Drager syndrome, infections, infarction of cardiac and central nervous system vessel e.g. stroke, sepsis, infammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in premals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention.

cycostatic, anti-intiammacory, immunomodulator, vulnerary,
neuroprotective, activin, inhibin, chemotactic, haemostatic, thrombolytic
and anti-inflammatory activity and acting as cytokine modulators,
and anti-inflammatory activity and acting as cytokine modulators,
and anti-inflammatory, tissue growth modulators and/or cadherin
suppressors. The polypeptides and polynuclectides are useful in gene
therapies, particularly for preventing, treating or ameliorating any of
the following diseases: immune deficiency and disorders; e.g. bacterial
or fungal infections, autoimmune disorders, cancer, systemic lupus
crythematosus or graft-versus-host disease; myeloid or lymphoid cell
osteoarthritis; central and peripheral nervous system diseases and
centropathies, e.g. Alzheimer's, Parkinson's disease, Huntington's
disease, amyotrophic lateral sclerosis or Shy-brager syndrome;
candiac infartion or stroke; inflammators, sepsis
or systemic inflammatory response syndrome, ischaemia-reperfusion
crythir, endotoxin lethality, arthritis, inflammatory bowel disease or
crohn's disease; or tumours or cancers, pemphigus vulgaris or pemphigus
               are deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polynuclectides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        95 ATGAACCGGAGGAAGTTTCTTTACCAATTCAAAATGTCCGCTGGGCTAAGGGTCGGCGT 154

amino acid sequences given in AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cuclivity, and can be used in gene therapy and vaccine production. (I) rotations and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting polynucleotides may be used to produce the secreted (I), by inserting the cards into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK87695 and AAM82169 represent invention. AAK84942 to AAK87695 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis

The expression of RNA-associated proteins is closely associated with reproductive tissues, nervous tissues, cell proliferation including cancer, inflammation and immune responses, and so they may be used for diagnosis, treatment or prevention of cell proliferative, immuneatory disorders, and reproductive disorders. Diseases and disorders which may be treated include actinic keratosis, antherosclerosis, arteriosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysomal nocturnal hemoglobinuria, polycythermia vera, psoriasis, primary thrombocythemia

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, and methods of detecting the nucleotides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides of the invention have homology to known proteins, thereby yolypeptides of the invention have homology to known proteins, thereby yolypeptides of the invention have homology to known proteins, thereby yolying an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; activity in mmunomodulatory activity; activit or inhibit related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or

                                                                                                                                                                                                                                                                                             ABB12093
                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                 The interaction retails to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides we certors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and the proteins are useful in advive the supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAUS9510-AAU33304 represent the amino acid. In treatment of leukaemias. AAUS9510-AAU33304 represent the amino acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TITITITITITITITICIGAGACAGAGICITGCICTIGICGCCCAGGCTGGAGTGCAACGG 2070

conditions, receptor or ligand activities; or may be convolved in oncogenesis, cancer cell proliferation or metastasis.

C Depending on their biological activities, polypeptides and nucleotides of conditions, e.g., by protein or gene therapy. Such conditions include disorders, hematopoletic disorders (e.g., myeloid) or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, vascular growth. Polypeptides involved with tissue regeneration and required (e.g., of burns, incisions and ulcers), while those with conditions and ulcers, incisions and ulcers), while those with conditions and ulcers, incisions and ulcers, while those with conditions and ulcers, while those with growth. For example, such polypeptides may be used in the treatment of viral, prowh factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used in the treatment of viral, manipulate stem cells outlure to give rise to neurophithelial cells may be used to augment or replace cells damaged by illness, may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2117 TTTCTGAGACAGAGTCTTGCTCTTGTCGCCCAGGCTGGAGTGCAACGGCACGATCTCAGC 2058

```
The present sequence is provided in a specification relating to nucleic acid molecules encoding 32 novel human secreted polypeptides. The nucleic acid molecules and polypeptides may be used in the prevention, diagnosis and treatment of diseases such as immune disorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and caucher's disease), cardiovascular diseases (e.g. Scimitar syndrome, chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic retinopathy), neurological disorders (e.g. Huntington's chorea, coronary alsorders (e.g. Huntington's chorea, coronary alsorders (e.g. Huntington's chorea, coronary alsorders (e.g. Huntington's chorea, corp. promoting wound healing, regeneration and/or chemotaxis. The nucleic acid molecules may be used to produce the secreted polypeptides. They may coronary services also be used as DNA probes in diagnostic assays to detect and quantitate coll polypeptides may be used as antigens in the production of antibodies and assays to identify modulators of their expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2093 GTCGCCCAGGCTGGAGGGCACGCACGATCTCAGCTTACTGCAACGTCCACCTCCTGGG 2034

The nucleic acid molecules and polypeptides may be used in the prevention, diagnosis and molecules and polypeptides may be used in the prevention, diagnosis and treatment of diseases such as immune disorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative disorders (e.g. conners and Gaucher's disease), cardiowascular diseases (e.g. Scimitar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic cisorders (e.g. corneal graft neovascularisation and diabetic retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's diseases), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis. The nucleic acid molecules may be used to produce the secreted polypeptides. They may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples. The polypeptides may be used as antigens in the production of antibodies and

PRIMATE GENOMES WITH AN AVERAGE SPACING OF 4 KB. SOME OF THEM ARE ACTIVELY TRANSCRIBED BY POL III. NORMAL TRANSCRIPTS MAY CONTAIN ALU-DERIVED SEQUENCES IN 5' OR 3' UNTRANSLATED REGIONS. HOWEVER, CDNA LIBRARIES ALSO CONTAIN PARTIAL AND/OR REARRANGED CDNAS LIGATED WITH ALU-DERIVED SEQUENCE IN ANY ORIENTATION. ALTHOUGH ALU ELEMENTS (ESPECIALLY SITUATED ON THE COMPLEMENTARY STRAND) HAVE A GREAT POTENTIAL TO CREATE ADDITIONAL/ALTERNATIVE EXONS, CONSIDERATION SHOULD BE GIVEN TO THE POSSIBILITY THAT THE PRESENCE OF AN ALU IN AN OPEN READING FRAME MAY HAVE RESOLTED FROM A CLONING ARTIFACT OR MAY BE DUE TO MISINTERPRETATION OF SEQUENCING DATA. THIS POINT HAS BEEN OVERLOCKED ON SEVERAL OCCASIONS, WITH CORRESCUENCE OF ERRONEOUS ALU-DERIVED AMINO ACID SEQUENCES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. "Reconstruction and analysis of human Alu genes.";
J. Mol. Evol. 32:105-121(1991).
-!- MISCELLANEOUS: VARIOUS ANALYSES (SEE REF.3 AND REF.4) INDICATE
THAT ALU REPEATS FALL INTO 8 SUBFAMILIES. THEREFORE, 8 ALU WARNING
CONSENSUS SEQUENCES HATE BEEN CONSTITUTED THAT CONTAIN ALL SIX
FRAMES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CAUTION: ALU REPETITIVE SEQUENCES ARE INTERSPERSED IN HUMAN AND REMATE GENOMES WITH AN AVERAGE SPACING OF 4 KB. SOME OF THEM ARE ACTIVELY TRANSCRIBED BY POL III. NORMAL TRANSCRIPTS MAY CONTAIN ALU-DERIVED SEQUENCES IN 5' OR 3' UNTRANSLATED REGIONS. HOWEVER, CDNA LIBRARIES ALSO CONTAIN PARTIAL AND/OR REARRANGED CDNAS LIGGATED WITH ALU-DERIVED SEQUENCE IN ANY ORIENTATION. ALTHOUGH ALU ELEMENTS (ESPECIALLY SITUATED ON THE COMPLEMENTARY STRAND) HAVE A GREAT POTENTIAL TO CREATE ADDITIONAL/ALTERNATIVE EXONS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Identifying coding exons by similarity search: alu-derived and other potentially misleading protein sequences."; Genomics 12:838-841(1992).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CODON, 'XXX' IS USED TO SEPARATE THE VARIOUS TRANSLATION PHASES. CAUTION: THIS ALU ENTRY IS PROVIDED IN ORDER TO AVOID THE FURTHER POLLUTION OF PROTEIN SEQUENCE DATABASES WITH ALU-DERIVED AMINO
                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

CAUTION: ALU REPETITIVE SEQUENCES ARE INTERSPERSED IN HUMAN AND PRIMATE GENOMES WITH AN AVERAGE SPACING OF 4 KB. SOME OF THEM ARE PRIMATE GENOMES WITH AN AVERAGE SPACING OF 4 KB. SOME OF THEM ARE ACTIVELY TRANSCRIBED BY POL III. NORMAL TRANSCRIPTS MY COMPAIN ALCI-DERIVED SEQUENCES IN 5' OR 3' UNTRANSLATED REGIONS. HOWEVER, CDNA LIBRARIES ALSO CONTAIN PARTIAL AND/OR REARRANGED CDNAS LIGATED WITH ALU-DERIVED SEQUENCE IN ANY ORIENTATION. ALTHOUGH ALU ELEMENTS (ESPECIALLY SITUATED ON THE COMPLEMENTARY STRAND) HAVE A GREAT POTENTIAL TO CREATE ADDITIONAL/ALTERNATIVE EXONS, CONSIDERATION SHOULD BE GIVEN TO THE POSSIBILITY THAT THE PRESENCE OF AN ALU IN AN OPEN READING FRAME MAY HAVE RESCULED FROM A CLONING ARTIFACT OR MAY BE DUE TO MISINTERPRETATION OF SEQUENCING DATA. THIS POLINT HAS BEEN OVERLOOKED ON SEVERAL OCCASIONS, WITH THE CONSEQUENCE OF ERRONEGUS ALU-DERIVED AMINO ACID SEQUENCES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAUTION: ANY SIGNIFICANT SIMILARITY OF A PUTATIVE PROTEIN SEQUENCE WITH AN ALU-TRANSLATED EWRY MUST BE TAKEN AS A WARNING THAT A PART OF ALU REPEAT MAY HAVE BEEN ARTIFACTUALLY INCLUDED IN THE CODING NUCLEOTIDE SEQUENCE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Reconstruction and analysis of human Alu genes.";
J. Mol. Evol. 32:105-121(1991).

-i. MISCELLANEOUS: VARIOUS ANALYSES (SEE REF.3 AND REF.4) INDICATE
-i. MISCELLANEOUS: PALL INTO 8 SUBFAMILIES. THEREFORE, 8 ALU WARNING
CONSENSUS SEQUENCES HAVE BEEN CONSTITUTED THAT CONTAIN ALL SIX
FRAMES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MISCELLANGOUS: ISOLATED 'X' INDICATES THE PRESENCE OF A STOP CODON, 'XXX' IS USED TO SEPARATE THE VARIOUS TRANSLATION PHASES. CAUTION: THIS ALU ENTRY IS PROVIDED IN ORDER TO AVOID THE FUBTHER POLLUTION OF PROTEIN SEQUENCE DATABASES WITH ALU-DERIVED AMINO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying coding exons by similarity search: alu-derived and other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAUTION: ALU REPETITIVE SEQUENCES ARE INTERSPERSED IN HUMAN AND PRIMATE GENOMES WITH AN AVERAGE SPACING OF 4 KB. SOME OF THEM ARE ACTIVELY TRANSCRIPED BY POL III. NORMAL TRANSCRIPES MAY CONTAIN ALU-DERIVED SEQUENCES IN 5' OR 3' UNTRANSLATED REGIONS. HOWEVER, CDNA LIBRARIES ALSO CONTAIN PARTIAL AND/OR REARRANGED CDNAS LIGGATED WITH ALU-DERIVED SEQUENCE IN ANY ORIENTATION. ALTHOUGH ALU SIEMENTS (ESPECIALLY SITUATED ON THE COMPLEMENTARY SYRAND) HAVE A GREAT POTENTIAL TO CREATE ADDITIONAL/ALTERNATIVE EXONS, CON ALU IN AN OPEN READING FRAME MAY HAVE RESCULED FROM A CIONING ARTIFACT OR MAY BE DUE TO MISINTERPRETATION OF SEQUENCING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MOI. EVOI. 32:105-121(1991).
MISCELLANEOUS: VARIOUS ANALYSES (SEE REF. 3 AND REF. 4) INDICATE
THAT ALU REPEATS FALL INTO 8 SUBFAMILIES. THEREFORE, 8 ALU WARNING
CONSENSUS SEQUENCES HAVE BEEN CONSTITUTED THAT CONTAIN ALL SIX
FRAMES CONCEPTUAL TRANSLATIONS OF EACH OF THESE CLASSES OF ALU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEQUENCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MISCELLANGOUS: ISOLATED 'X' INDICATES THE PRESENCE OF A STOP CODON, 'XXX' IS USED TO SEPRATE THE VARIOUS TRANSLATION PHASES. CAUTION: THIS ALG ENTRY IS PROVIDED IN ORDER TO AVOID THE PERTHER POLLUTION OF PROTEIN SEQUENCE DATABASES WITH ALG-DERIVED AMINO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     similarity search: alu-derived and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DATA. THIS POINT HAS BEEN OVERLOOKED ON SEVERAL OCCASIONS, WITH THE CONSEQUENCE OF ERRONEOUS ALU-DERIVED AMINO ACID SEQUENCES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CAUTION: ANY SIGNIFICANT SIMILARITY OF A PUTATIVE PROTEIN SEQUE
WITH AN ALU-TRANSLATED ENTRY MUST BE TAKEN AS A WARNING THAT A

ACID SEQUENCES.

CAUTION: ALLO REPETITIVE SEQUENCES ARE INTERSPERSED IN HUMAN AND PRIMATE GENOMES WITH AN AVERTAGE SPACING OF 4 KB. SOME OF THEM ARE ACTIVELY TRANSCRIBED BY POL III. NORMAL TRANSCRIPTS MAY CONTAIN ALU-DERIVED SEQUENCES IN 5' OR 3' UNTRANSCRIPTS MAY CONTAIN LIBRATIES ALSO CONTAIN PARTIAL AND/OR REARRANGED CUDAS.

LIGATED WITH ALU-DERIVED SEQUENCE IN ANY ORIENTATION. ALTHOUGH ALU ELEMENTS (ESPECIALLY SITUATED ON THE COMPLEMENTARY STRAND) HAVE A GREAT POTENTIAL. TO CREATE ADDITIONAL/ALTERNATIVE EXONS.

OCNSIDERATION SHOULD BE GIVEN TO THE POSSIBILITY THAT THE PRESENCE OF AN ALU IN AN OPEN READING FRAME MAY HAVE RESULTED FROM A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAUTION: ANY SIGNIFICANT SIMILARITY OF A PUTATIVE PROTEIN SEQUENCE
